Before we get into the reviews, I'll get one thing out of the way. Photography and design are two areas of professional media production where computers have been quickly taking over for more than a decade. After years of using the mouse on a PC, I've recently been exploring the pen input in Adobe *Creative Suite* on Macbook and iPad Pro. So you can imagine there's not a week that goes by that I don't use a digital pen camera in one way or another. But I digress from my original intent.

Let's start with the hardware. I had to unbox and charge the Adobe Photoshop Elements 2021 Performance-certified PC . The PC weighs less than 2 pounds, despite its 27.2-inch display. This thing is featherweight.

**ABOVE:** You can store photos and videos on an Adobe Photoshop Elements 2021 performance-certified laptop . As shown in the above photo, I connected my laptop to a USB-C to USB-3 adapter.

One feature that stood out right away was the high-intensity, power-saving display. Unlike the last E-series PC's display, which was LED backlit, this one features an IPD (in-plane switching) LCD panel that produces about 800 lumens. I don't typically notice displays this bright, but it's great for photographing bright scenes, particularly if you're having to shoot quickly in low light. Outside, the display is very sharp. My only complaint is that the bezels on the iPad's screen are a hair thicker than on earlier E-series versions. It's not a dealbreaker, but that's a bit of evidence that the screen notch has made its way into this year's line.
