I have an older version of Lightroom that I've been using for quite some time and I recently bought a new MacBook Pro. The upgrade gave me a new opportunity to see just how much better Lightroom 5 is than Lightroom 4.3. The upgrade was painless and pleasant. Adobe has always been attentive to its customers and has better interactivity. For example, Adobe has added a few extra controls at the bottom of the Details panel (it used to come to the side). I don't really see why the Details panel couldn't have been rearranged when a user needed it. In addition, the rotation and scale controls shown in the metadata panel are basically hidden, which makes them less discoverable. I still find myself hitting the N key to get this panel back whenever I need it.

This is important hardware support, not only for us, but for our workflow as well. We've done a lot of tinkering with our new MacBook Pro. Pages began at 34% and Safari at 47% before it started acting up. That said, it was an easy fix. In addition, Pages began at 30% when it was closed. Again, an easy fix. As you'd expect, there are many other steps that impact other software. Lightroom 5 was up and running at 82% on the new Macbook. What's important is that Lightroom 5 went from a 0.8 GB program to a 1.5 GB program. I haven't tried Lightroom 5 on other types of computers yet and I will have to do so when I have a chance. For now, this review will continue with Lightroom 4.3. If you hear me complain about disk space, about performance, or about the software crashing, then you need to know that Lightroom 5 works smoothly on a MacBook Pro.
