Adobe Photoshop is the most popular photo editing software. Why? Because nothing else can match Photoshop's features, capabilities, functions and the features list is getting better and better by the year. Adobe's latest release of the product is called Lightroom 5.

ABOVE: This image of the Hubble Space Telescope was adjusted and retouched with the features available in the latest version of Photoshop Touch. **BELOW:** The VGA image was downsized to be smaller and thereby easier to post online. The image is set to 24 bits per channel, which gives you a much richer, more fine-

grained look during color and exposure adjustments.

Photoshop Touch lets you drag and resize photos and select parts of them for cropping, which is available under creative actions. Such actions can also be applied to the entire image by using a slide or one of the new masks described above.

The workflow in Photoshop isn't just accelerated, it becomes easier to understand. Images are processed in a single pass, incorporating a variety of adjustments at the same time, yielding a brilliant overall effect. The best part? Photographers are able to use the full channel and merge capability of their RAW processor if they wish.
